Re: Bristol-Myers Squibb Company
NRC Demand for Information; Supplemental Response

Dear Ms. McIntosh:

On March 17, 2009, Bristol-Myers Squibb Company submitted a response to the Nuclear Regulatory Commission's Demand for Information dated January 16, 2009. Our response was based on information provided by employees located at each facility owned or operated by Bristol-Myers Squibb Company and its subsidiaries. In the two weeks since our response was submitted, additional information has become available. Because we have identified new information that was not available when we submitted our recent response, and to assure that the NRC has accurate information, we submit this supplemental response to the Demand for Information.

In this supplemental response, the following additional information is provided:

- ☐ The facility located in Zeeland, MI, and operated by our subsidiary, Mead Johnson & Company, initially reported it had no tritium exit signs, but subsequent to our response, they located 2 tritium exit signs in use. We also identified purchase records indicating that 3 tritium signs were shipped to the Zeeland facility in 1999. Because only 2 signs are identified, 1 of the 3 signs is now identified as "missing."
- ☐ The facility operated by another subsidiary, Bristol-Myers Squibb Manufacturing Company, in Humacao, PR, now reports that it has identified 2 additional tritium signs in use at the facility, raising their number in use at that facility from 3 to 5.
- ☐ The facility operated by our subsidiary, BMS Holdings Pharma, LLC, in Manati, PR, reports that it has located another 3 signs in use, increasing the number of signs in use at the facility, and decreasing the number of missing signs reported.
- ☐ The facility operated by our subsidiary, Bristol-Myers Squibb Manufacturing Company, in Barceloneta, PR, has been closed and reported that 10 signs are in use. However, since March 17, we have identified purchase records that indicate 20 tritium exit signs were

April 7, 2009

Page 2

shipped to the facility from June 2005 to November 2006. Because we are unable to account for all of these signs, we are now listing 10 signs as missing for the Barceloneta facility.

- ☐ The facility operated by our subsidiary, E.R. Squibb & Sons, LLC, in Lawrenceville, NJ, reports that it has identified 1 additional tritium exit sign in use, and now can account for 2 signs listed as "missing" in our March 17 response: 1 is in storage and 1 was returned to the manufacturer.

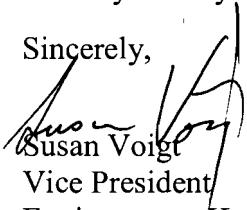

Considering this newly available information, eleven (11) facilities currently operated by BMS Subsidiaries possess a total of six hundred and thirty-eight (638) tritium exit signs either in use or in storage. We cannot confirm the location of ninety-one (91) tritium exit signs that our records indicate we should possess, including ten (10) exit signs that were identified as missing in 1990 and properly reported to the Agreement State. A revised Table A for our response is attached. Based on currently available information, the attached Table A is complete and accurate.

We apologize for any inconvenience this supplemental submission may cause.

Please let me know if you have any questions, or require additional information.

Thank you for your consideration.

Sincerely,

Susan Voigt

Vice President

Environment, Health and Safety

Table A (revised April 7, 2009)

<u>Facility</u>	<u>Operator</u>	<u>Signs in Use</u>	<u>Signs in Storage</u>	<u>Missing Signs</u>	<u>Person Responsible for Tritium EXIT Signs</u>
Barceloneta, PR	Bristol-Myers Squibb Manufacturing Company	10	0	10	This facility has been closed, and is being sold.
